About

From all of us at Pickard Roofing — Welcome!

Since 1928 Pickard Roofing has been at the forefront of the Triangle's custom roofing industry. The secret to our longevity is simple. *We consistently deliver the expert workmanship and premium quality materials our customers expect.* Every roof has unique details that require extra attention, and one of the things we love best is solving a roofing challenge.

When you choose Pickard Roofing, you choose a company that cares about every detail of the job. We promise to stand behind every aspect of our work and guarantee that the expert craftsmanship, quality materials, and customer service put into each roof will span generations. Above all, we are grateful to our customers for the lifelong relationships that continue after a roof is installed.

— The Pickard Family

Process

We are committed to providing excellent work at a fair price. Our process is guided by this commitment using the following principles:

Design

Our process is not simply about using quality materials but truly designing an investment roofing system that protects and endures for the long haul. The design process is one of the most important elements of the Pickard process as it results from over 90 years of roofing experience.

Craft

Determining the details of every element of your roofing system requires a craftsman's eye and an engineer's commitment to accuracy. This blend of art and science is truly the essence of an expert roofer and something that the Pickard family is proud to provide our clients.

Renew

Maintaining the quality and durability of your roofing system, or even renewing the one you currently have, is part of our commitment to you. Ask us about our ongoing maintenance and service plans to protect your investment.

Shingle Roofing

Some could argue that the quality and type of shingle used directly correlates to the strength of your roofing system—that is why Pickard Roofing only utilizes the very best shingles in the industry. Do you have questions about shingle type, features, warranties, and colors? We've got you covered - just make sure to ask your Pickard representative during your next design or quote consultation.

Architectural Shingles

Triangle home and business owners favor architectural shingles over other roofing options and have made Pickard Roofing the Triangle's choice for their installation, repair, and roof maintenance needs. Architectural roofing shingles are a popular residential roofing choice, due to their **durability, appearance, and price point**. Stronger than traditional shingles, architectural roofing shingles create a dramatic, three-dimensional look. Not only visually appealing, the price point is not much more than traditional shingles.

Ornamental Shingles

Ornamental shingles are a stunning choice for homeowners who want to make the roof a statement in the architectural design of their home. Ornamental shingles include a unique chambered cut for a scalloped appearance, a dimensional tab that mimics the look and feel of natural slate or cedar shakes, and distinctly sculpted shingle that provides a unique rustic look.

Institutional Roofing

Churches and schools face unique challenges during roof replacement. Factors such as the size, number of people who visit the site regularly, cost, and type of roofing material required must be considered when planning how and when the roof is to be replaced. Large commercial projects require more time and better weather than small residential jobs, and it is crucial to ensure that the work can be done safely without putting the public at risk.

Institutional buildings typically have more than one type of roof system, such as flat or low slope roofs adjoining shingled pitched roofs. Pickard Roofing can recommend, provide accurate quotes, and install the best products for your unique needs and budget.

Metal Roofing

A metal roof is a **valued investment**, offering an extremely long service life, durability that withstands everything Mother Nature can throw at it, and custom colors, patterns, styles and brands to make your metal roof a **unique reflection of your style**.

Pickard Roofing experts know all about metal roofing systems from precise installation of copper, painted steel, aluminum, zinc, or galvanized roofing solutions to repair and maintenance. This is why Pickard Roofing is the Triangle's metal roofing leader.

Double Lock Standing Seam ^

Usually used in copper and zinc metal roofs, the double lock standing seam style offers high durability and longevity with minimal maintenance. The craftsmanship and architectural lines of the seams make this technique a beautiful accent to both traditional and contemporary building designs.

Snap Lock Standing Seam >

Gaining popularity with owners, the snap lock standing seam metal roof system offers both a durable and cost-effective option. This residential and commercial metal roof system usually uses painted steel or aluminum. It is available in many color options with hidden fasteners so there are no penetrations in the face of the metal.

Tile & Slate Roofing

When you want your new roof to **make a statement**, consider tile or slate roofing materials. Tile & slate shingles provide the most **visual appeal** available while offering the quality and performance you expect.

Pickard Roofing specializes in tile & slate roofing, expertly installing beautiful, functional slate, clay, cement, and metal shingle roofing- creating an elegant and **incredibly durable** roof lasting many generations.

Design.Craft.Renew.

Custom Metal Fabrication & Craftsmanship

One size does not fit all. When a roofing project requires specialty components that can't be purchased by a manufacturer, Pickard Roofing's metalwork experts craft the unique pieces required. Our metal fabricators create made-to-order pieces which offer **precision, strength, and beauty.**

As the Premier Metal Fabricators in the Triangle, you can depend on Pickard Roofing to provide unique custom metalwork and **craftsmanship** with unmatched quality.

Gutters

Downspouts

Flat/Low Slope Roofing

The performance of your roof depends on the **expert design** of your roofing system. At Pickard Roofing we start with a great design that includes a tapered slope for appropriate water shedding, the appropriate waterproofing layers, flashings, reinforcement, surfacing, and drainage. Whether you need a roof replacement, minor repairs, or annual maintenance, Pickard Roofing provides **expert services** to ensure the right design, materials, and workmanship are used for long lasting results.

TPO

Thermoplastic polyolefin (TPO) systems are single-ply roofing membranes and continue to be the most popular choice for business and home owners with low slope systems. TPO offers several important benefits including:

Strength

The TPO roof is resistant to breakdowns, corrosion, and abrasions of any kind. In addition, their heat-welded seams are extremely strong, adding to the durability of the TPO roof.

Green

TPO has a high reflectivity of light (high SRI) and meets ENERGY STAR® Specifications.

Low Maintenance

The strength of the TPO roofs makes them easy to maintain, requiring minimal repairs.

Climate/Weather Resistance

Neither wind, UV light, hail, nor extreme temperatures can match the performance of a TPO roof installed by Pickard Roofing Company.

Available TPO colors

White
Grey
Tan

Built-up

Because the elements and traffic can take their toll on some areas of even the best roofs, the second, third, and fourth layers ensure worry-free protection. Pickard Roofing's attention to detail truly sets our built-up roofs apart. We often include copper flashings and surfacing, which together improves premature failure due to corrosion. This means our built-up roof can provide as much as 40-50 years of protection.

In addition to traditional built-up roofing, we also install modified bitumen roofs when the odors associated with asphalt are an issue. This type also serves well in high foot traffic areas in commercial situations.

EPDM

EPDM, or ethylene propylene diene terpolymer rubber roofing has been popular for its high performance. Pickard Roofing has seen this performance first-hand, after installing countless EPDM roofing systems on commercial buildings across the Triangle.

Our experts are the Triangle's preferred roofing contractors: installing, re-roofing, designing, maintaining, and repairing EPDM rubber roofs.

Roof Maintenance and Inspection Service

At Pickard Roofing, we think long-term, and regularly scheduled roof maintenance is the best way to increase the life-expectancy of your roof investment. Rain, snow, ice, and leaves can damage shingles, clog gutters, and cause leaks. Regular inspections keep your roof free of debris, and will ensure optimal performance and protect your assets from costly damage.

Our Program Includes:

Routine Inspections:

Comprehensive annual or bi-annual Inspections with recommended proactive plans ensure your roofing system is functioning properly.

Roof and Gutter Cleaning:

We will delicately clear debris from your roof, and inspect for any damage the debris may have caused.

Priority Service:

For critical repairs, members of our maintenance program will receive priority service and scheduling, no matter what the season.

Multi-Property Discount:

Multi-Property owners save more and can rest easy knowing all of their roofs are taken care of by the Pickard family.

“ We used Pickard Roofing to re-shingle our roof and upgrade our gutters and downspouts. For the last several years we have used them to clean the gutters several times a year. Our roof is high and steep and we have many trees on the property. They have always come promptly and done a thorough job. They are a professional group and take their work seriously. I would highly recommend them for replacing shingles, installing gutters and downspouts, and providing ongoing maintenance. ”

— Stephen B

Here are a few issues to look for during inspection:

Signs of Leaks

Check for leaks regularly. Look in your attic for signs of water stains. Next, look at your ceilings. Finally, check the chimney flashing for signs of water intrusion.

Clogged Gutters & Downspouts

Clean all leaves, dirt, and debris out of your gutters regularly. If left alone, they can prevent water from draining properly, and cause a variety of problems.

Loose or Missing Shingles

North Carolina summers cause extreme heat on the roof. Nails can pop, and shingles can shift or lift. Chances are if you find one loose shingle, you'll find more.

Debris

Look for piles of leaves, sticks, twigs and other debris on the roof

Caulk

Inspect the caulk around flashing and seams. Look for cracks and missing caulk.

Flashing

Flashing should be rust-free and clear of cracks and corrosion.

Soft Spots

Dips or soft spots are an indication of rot or structural trouble beneath the surface.

Water or Ponding Stains

Water and mud stains indicate that water has been puddling, either around the drainage pipes or in other areas.

General Wear and Tear

Roofing materials age at different rates. We can estimate the useful life of your roof system, as well as prevent premature failure.
